- 1. A method for providing enhanced absorption of a pharmaceutically acceptable amine into the blood of a human comprising providing a pharmacologically effective dosage of a pharmaceutically acceptable amine and an effective amount of a nonsteroidal anti-inflammatory acidic drug in a stable liquid form.
- 2. The method of claim 1 wherein the enhanced absorption is indicated by AUC 1H (early drug exposure) that is at least about 10% higher than the early drug exposure of the same amine from a single-ingredient liquid.
- 3. The method of claim 1 wherein the enhanced absorption is indicated by AUC 2H (early drug exposure) that is at least about 10% higher than the early drug exposure of the same amine from a single-ingredient liquid.
- 4. The method of claim 1 wherein the enhanced absorption is indicated by a CMAX (maximum or peak concentration) that is at least about 10% greater than the CMAX of the same amine from a single-ingredient liquid.
- 5. The method of claim 1 wherein the stable liquid form is a suspension.
 - 6. The method of claim 1 wherein the amine is pseudoephedrine.
 - 7. The method of claim 1 wherein the nonsteroidal anti-inflammatory drug is ibuprofen.
 - 8. The method of claim 6 wherein the pseudoephedrine is provided in a range from about 15 mg to about 60 mg per dosage unit.

MCP-226 13

9. The method of claim 6 wherein the pseudoephedrine is provided in a range from about 15 mg to about 45 mg per dosage unit.

- 10. The method of claim 7 wherein the ibuprofen is provided in an amount of from about 40 mg to about 800 mg per dosage unit.
- 11. The method of claim 7 wherein the ibuprofen is provided in an amount of from about 40 mg to about 300 mg per dosage unit.
- 12. The method of claim 1 wherein the amine is pseudoephedrine at about 15 milligrams and the nonsteroidal anti-inflammatory is ibuprofen provided at a level at about 100 milligrams per 6 mL.
 - 13. The method of claim 1 wherein the human is a child.

14. A composition comprising a pharmacologically effective amount of a pharmaceutically acceptable amine and a pharmacologically effective amount of a nonsteroidal anti-inflammatory drug, said amine and nonsteroidal anti-inflammatory drug are provided in a stable liquid form.

- 15. The composition of claim 14 wherein the stable liquid form is a suspension.
- 16. The composition of claim 14 wherein the nonsteroidal anti-inflammatory drug is ibuprofen and the pharmaceutically acceptable amine is pseudoephedrine.
- 17. The composition of claim 16 wherein the ibuprofen is provided at dosage of about 100 milligrams and the pseudoephedrine is provided at a dosage of about 15 milligrams per 6 mL.
